(57) **ABSTRACT**

A resource controller for managing resources in a network and arranged at a site of a first network entity is provided, wherein the resource controller comprises: a database, adapted to store resource managing related information; an interface adapted to receive a resource managing message from a second network entity at the first network entity; and a resource managing unit, wherein the resource managing unit is adapted to grant access to the stored resource managing related information on the database based on the received resource managing message.
